Building Automation: Control Devices and Applications In Partnership with NJATC

A building automation system is a network of "intelligent" control devices used in one or more building systems, such as HVAC, lighting, and security systems. Building automation systems operate cooperatively to share building information and control system devices automatically according to programmed logic. Building Automation: Control Devices and Applications focuses on these control devices and how they work together in common automation scenarios. This textbook covers the operation, signals, and functions of the sensors, actuators, and other control equipment used in automated systems in commercial buildings. The textbook is organized by building system, and each system is explained so that the function and application of each device is clear. The system-based foundation is then used to discuss the typical interactions between multiple systems in automated buildings.
