Pediatric Neurology: Chapter 113. Virus-induced lesions and the fetal brain: examples of the transmission of HIV-1 and CMV from mother to offspring (Handbook of Clinical Neurology) Marc Tardieu, Mathurin Tejiokem, Seraphin Nguefack

Human immunodeficiency virus 1 (HIV-1) and cytomegalovirus (CMV) are among the most frequently transmitted viruses from an infected mother to her offspring. The clinical consequences of transmission depend heavily on the time of transmission, the virus concerned, and maternal status. This chapter describes first the natural course of neurological aspects of HIV-1 infection and the way in which it has been modified by HAART in developed countries. It then describes the situation in the African context (taking Cameroon as an example) where HAART is not readily available and the natural course of the disease may be different. Finally, we consider the possible toxic effects on the developing central nervous system of antiretroviral drug administration during pregnancy. Congenital CMV infection leads to a wide spectrum of symptoms and is not always apparent at birth. When CMV infection occurs early during gestation, it disturbs the neurogenesis of the central nervous system while late-onset CMV infection affects brain growth and the development of the white matter, leading to leukomalacia and cyst formation, usually associated with intraparenchymatous calcifications. Neurosensory hearing loss frequently occurs and may be the only symptom in cases of perinatal infection.

From reader reviews:

Norman Brown:

Book is usually written, printed, or descriptive for everything. You can learn everything you want by a e-book. Book has a different type. We all know that that book is important issue to bring us around the world. Close to that you can your reading proficiency was fluently. A e-book Pediatric Neurology: Chapter 113. Virus-induced lesions and the fetal brain: examples of the transmission of HIV-1 and CMV from mother to offspring (Handbook of Clinical Neurology) will make you to end up being smarter. You can feel considerably more confidence if you can know about every thing. But some of you think that will open or reading any book make you bored. It's not make you fun. Why they may be thought like that? Have you seeking best book or ideal book with you?

Amy Petersen:

What do you think about book? It is just for students because they're still students or that for all people in the world, exactly what the best subject for that? Just simply you can be answered for that question above. Every person has several personality and hobby for each other. Don't to be pushed someone or something that they don't need do that. You must know how great as well as important the book Pediatric Neurology: Chapter 113. Virus-induced lesions and the fetal brain: examples of the transmission of HIV-1 and CMV from mother to offspring (Handbook of Clinical Neurology). All type of book are you able to see on many resources. You can look for the internet options or other social media.

Neil McNatt:

Your reading 6th sense will not betray you actually, why because this Pediatric Neurology: Chapter 113. Virus-induced lesions and the fetal brain: examples of the transmission of HIV-1 and CMV from mother to offspring (Handbook of Clinical Neurology) guide written by well-known writer whose to say well how to make book which might be understand by anyone who all read the book. Written within good manner for you, still dripping wet every ideas and producing skill only for eliminate your own hunger then you still doubt Pediatric Neurology: Chapter 113. Virus-induced lesions and the fetal brain: examples of the transmission of HIV-1 and CMV from mother to offspring (Handbook of Clinical Neurology) as good book not only by the cover but also through the content. This is one publication that can break don't ascertain book by its include, so do you still needing another sixth sense to pick this specific!?! Oh come on your studying sixth sense already said so why you have to listening to an additional sixth sense.

Joshua Miner:

In this particular era which is the greater particular person or who has ability to do something more are more special than other. Do you want to become considered one of it? It is just simple solution to have that. What you should do is just spending your time not very much but quite enough to get a look at some books. One of

many books in the top checklist in your reading list is Pediatric Neurology: Chapter 113. Virus-induced lesions and the fetal brain: examples of the transmission of HIV-1 and CMV from mother to offspring (Handbook of Clinical Neurology). This book that is qualified as The Hungry Mountains can get you closer in becoming precious person. By looking way up and review this book you can get many advantages.
