The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters is the summary of a workshop convened in February 2013 as a follow-up to the release of the National Research Council report *Terrorism and the Electric Power Delivery System*. That report had been written in 2007 for the Department of Homeland Security, but publication was delayed because of security concerns. While most of the committee's findings were still relevant, many developments affecting vulnerability had occurred in the interval. The 2013 workshop was a discussion of the committee's results, what had changed in recent years, and how lessons learned about the grid's resilience to terrorism could be applied to other threats to the grid resulting from natural disasters. The purpose was not to translate the entire report into the present, but to focus on key issues relevant to making the grid sufficiently robust that it could handle inevitable failures without disastrous impact. The workshop focused on five key areas: physical vulnerabilities of the grid; cybersecurity; mitigation and response to outages; community resilience and the provision of critical services; and future technologies and policies that could enhance the resilience of the electric power delivery system.

The electric power transmission and distribution system (the grid) is an extraordinarily complex network of wires, transformers, and associated equipment and control software designed to transmit electricity from where it is generated, usually in centralized power plants, to commercial, residential, and industrial users. Because the U.S. infrastructure has become increasingly dependent on electricity, vulnerabilities in the grid have the potential to cascade well beyond whether the lights turn on, impacting among other basic services such as the fueling infrastructure, the economic system, and emergency services. *The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters* discusses physical vulnerabilities and the cybersecurity of the grid, ways in which communities respond to widespread outages and how to minimize these impacts, the grid of tomorrow, and how resilience can be encouraged and built into the grid in the future.

From reader reviews:

Lila Dixon:

Have you spare time for the day? What do you do when you have considerably more or little spare time? Yeah, you can choose the suitable activity regarding spend your time. Any person spent their very own spare time to take a walk, shopping, or went to the actual Mall. How about open or perhaps read a book eligible The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters: Summary of a Workshop? Maybe it is to get best activity for you. You recognize beside you can spend your time with the favorite's book, you can cleverer than before. Do you agree with its opinion or you have various other opinion?

Andrew Fox:

Do you one of people who can't read gratifying if the sentence chained inside the straightway, hold on guys this aren't like that. This The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters: Summary of a Workshop book is readable by means of you who hate those perfect word style. You will find the info here are arrange for enjoyable looking at experience without leaving perhaps decrease the knowledge that want to provide to you. The writer associated with The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters: Summary of a Workshop content conveys objective easily to understand by many individuals. The printed and e-book are not different in the content but it just different such as it. So , do you nonetheless thinking The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters: Summary of a Workshop is not loveable to be your top list reading book?

Scott Duran:

Are you kind of occupied person, only have 10 or perhaps 15 minute in your morning to upgrading your mind talent or thinking skill perhaps analytical thinking? Then you are having problem with the book in comparison with can satisfy your short period of time to read it because this all time you only find publication that need more time to be study. The Resilience of the Electric Power Delivery System in Response to Terrorism and Natural Disasters: Summary of a Workshop can be your answer because it can be read by a person who have those short free time problems.

Frank Arnett:

Many people spending their period by playing outside along with friends, fun activity along with family or just watching TV the whole day. You can have new activity to shell out your whole day by studying a book. Ugh, think reading a book can really hard because you have to take the book everywhere? It alright you can have the e-book, bringing everywhere you want in your Mobile phone. Like The Resilience of the Electric
