An Introduction to the Visual System

Martin J. Tovée

An Introduction to the Visual System Martin J. Tovée

In recent years, there have been many advances in the understanding of how we see. This text provides a current, well-balanced account of the workings of the visual system by integrating new scientific developments within a framework of established theories and concepts. The book addresses topics such as image formation, visual development, and object recognition within a context both traditional and cutting-edge. The author, accounting for the challenge of digesting such a wealth of information, reinforces the reader's understanding by including a "key points" section at the end of every chapter. This comprehensive text is an ideal source of information on the visual system for undergraduates as well as graduate students.
